I just wanted to know if it is possible to have a version of this on one of your testing sites?

I am designing a new theme for it, as I said, but these days I am a little busy; I will be glad if you can manage it so that we make our XOOPS servers talk to each other! - Regards; - Farshid

Yes Absolutely,

I have an installed XOOPS 2.0.16 in subdirectory

<http://www.xoops.net.br>

We can use that....

EDIT: uploaded it according to the readme files...

Installed the module with no problem at all.

Did not make the edit I had c/p - front page block.

I did click on the web manger and got about the same thing you did on your page.

go on and sign in and check it out ... I have to sign in twice before I get in to admin. mode. (gliche that doesn't bother me)
