URL:

Hi

In your XOOPS dir find the "language/include/functions.php " file on the language folder and find the function redirect_header. Paste the code below over the "old one".

Warning: on doing that you?ll remove all redirect functions in your XOOPS site, not only the thank you for logging.....

```
/*
 * Function to redirect a user to certain pages
 */
function redirect_header($url, $time = 3, $message = "", $addredirect = true)
{
    global $xoopsConfig, $xoopsRequestUri;
    if (!defined('XOOPS_CPFUNC_LOADED')) {
        header("Location: $url");
        exit();
    } else {
        $url = preg_replace("/&/i", '&', htmlspecialchars($url, ENT_QUOTES));
        echo '
<html>
<head>
<title>'.$xoopsConfig['sitename'].'</title>
<meta http-equiv="Content-Type" content="text/html; charset='.$_CHARSET.'" />
<meta http-equiv="Refresh" content="'.$time.'; url='.$url.'" />
<style type="text/css">
    body {background-color : #fcfcfc; font-size: 12px; font-family: Trebuchet MS,Verdana, Arial,
Helvetica, sans-serif; margin: 0px;}
    .redirect {width: 70%; margin: 110px; text-align: center; padding: 15px; border: #e0e0e0 1px
solid; color: #666666; background-color: #f6f6f6;}
    .redirect a:link {color: #666666; text-decoration: none; font-weight: bold;}
    .redirect a:visited {color: #666666; text-decoration: none; font-weight: bold;}
    .redirect a:hover {color: #999999; text-decoration: underline; font-weight: bold;}
</style>
</head>
<body>
<div align="center">
<div class="redirect">
    <span style="font-size: 16px; font-weight: bold;">'.$message.'</span>
    <hr style="height: 3px; border: 3px #E18A00 solid; width: 95%;" />

```

```
        <p>'.sprintf(_IFNOTRELOAD, $url).'
```

Function hacked by [topet05](#)

In addition:

find your language xoops? folder, "user.php":

Around line 9, you'll find:

```
define("_US_LOGGEDOUT",.....
```

Log out message

```
=====
```

Around line 12:

```
define("_US_LOGGINGU",.....
```

Login message

```
=====
```

At the same dir:

file global.php

around line 90:

```
define("_NOPERM",.....
```

You don't have permissionbla bla message

I hope this helps a bit.

Regards
