Feature Requests:

-----

Suggestions:

1 - Block (Hanging answers)

You it will be able to find this in functioning in the site [www.xoops.net.br](http://www.xoops.net.br) but using newbb 1.0

As this is functioning.

The user creates a new topic. While nobody to answer it is in this block separately. Of this form we obtain a bigger productivity of the support teams. Elaborated answers more are carried through later that we activate this.

Quote:

Ok - Solution in CBB

Quote:

New Features for not replay in topic and topics replayed.

After corrections, update module newbb.

Configure blocks Show without solution and Show Topics Replayed.

2 - Block ( It decided my problem)

The functioning would be the following one: The user will go to receive a reply. If it to find that this decided the 100% its problem it will be able to mark this topic in special. Many other users also will

be able to mark this topic in special. We want to remember that only the reply in itself it is that it will have to receive this accompaniment. Of this form we will be able to have a block where the user could be directed to see answers that had really functioned.

As i mentioned before, I am really intrested in helping, specially i would like to be part of designer team.

=====

#### FEATURE REQUEST

Firsly, It would be a cool idea to have a voting system for each post. IN addition, I've seen this feature in Vbulletin so that people instead of wring comments with contents (thanks, nice, cool and etc...) , they just click on an egg button or a flower button under a post (as I discussed this with phppp). In vbulletin there is a "thanks" button which i think is very useful, but i think if we develop this feature such that each egg vote neutralizes a flower vote or even both count it would be great. We have the same feature for threads but this feature per post is also geat.

Secondly I thought , even if this voting feature developed in the core system, it would be great. I think there is a feature in ORKUT community so that people can vote for each other, so why shouldn't we develop this on XOOPS?

Well i think if we even give the person the ability to change his/her ideas that would be great also!

This is equal my solicitation
