I will take this space to make comments about the new [XOOPS Brasil](#) release.

1. yes, the new xbr have 106.831 files now, 700mb in fat32. And is XOOPS pure, without the server files. Now I need space to put apache and mysql.

2. The Quran module (ÃŒíÇÈ ÇáìãÉ) have a file in wave more than 2mb, and a name that... I dont understand. Im hacking this module, converting the wav to the best version of ogg vorbis aotuv 0.4, and I will ask the permission to chance the name of this module.

3. The ephemerids module have a file ephemerids\_data.sql with more than 10MB. Well... I will hackit, using a ZIP class. But... Im in love with 7z, after run it im my linux box.

4. The module myaddress have a file KEN\_ALL.CSV with more than 14mb. Pendent, I dont know what is.

And this is just to start...
