URL:

I was making a new version of XOOPSLANG, but... was impossible to continue: www.xoops.net.br have make use of the sourcecode in delphi7 to make a closed version, poor "protected" with aspack (was easy to decompile and look the same code there).

So the next version of xoopslang will be a component of "xoops"(?) server, coded with lua, and shared for friends only.

Delphi coders: the first source code can be found at sourceforge, XOOPS or [XOOPS Brasil](#) account. The main problem is the incompatibility with simple quotes -> ""

Easy to solve.

Another problem is some lang files with diferent codes, like the smartysection (still not translated to portuguese for it).
