Thanks Solo for your contact

In [XOOPS Brasil](#) was go to Boops.

Look it : [Clone XOOPS or Boops](#)

This is a known problem, already I passed this and other corrections for they, but they had been apparently ignored and still it occurs.

In version 2.0.13.2 by hack craze (still not launched, will have to come with diverse modules.

Kernel of this version was modified and vc can inside of its administrative area lower the modules desired of inside of the same one.

Everything this in proper version 2.10.13.2 a penalty that this is not being used for xoops.org

Congratz all
