any chance to download the first beta? or a demo with administration?

Yesterday I launched the rw-baner v1.5 in my site.

I did not say nothing here still therefore the module is only in Portuguese.

As soon as the translation will be finished will launch the module here also.

But if you desire to make download to test the module enough to have access the downloads area of my site.

<http://www.xoops.net.br/>

Thanks for the interest!
