Hi guys,

I made some changes in the hack. Now its possible turn off the hack in the admin area, it is enough to define the level of security of the passwords as unsafe that hack does not appear more. The function what analyzes the quality of the passwords also changed, now its more elaborated. Not yet is the ideal, but already he is well next.

Please make [download](#) again and see the readme file (now in english too).

So, is this. Any troubles or suggestions please report me.
