**Trying to Locate XT-Polls Module**

URL:

I recently saw in a really good article on frxoops that mentioned that Giba had reworked the poll module. I went to [XOOPS Brasil](#) which is where it listed it being located, but that site only gives me a news release without a download link. I see that they have a downloads section but I can't figure out whether the poll module is one of the files there.... :(

Could a kind Spanish/Portuguese speaker point me in the right direction, please? Is the file in their downloads directory?
