Hello guys, im pretty new to xoopand i want to know where to change the position of <{\$xoops_banner}> i want it more aligned to the right with the right menu

here the link to help understand, the banner is Hanumanjeans Thai Merchants

thanks again

Hi kauguru.

Rw-Banner is a module to manage and display random banners in anywhere on the site.

You can show random banners in the theme, in templates, blocks and also in the texts of other modules that use bbcodes as news or cbb for example.

The only problem is that for the time being the module alone is translated into Portuguese, but until the end of this week the translation for the English already must be ready.

For bigger information about the module read this [news](#) on my site (translated for google).
