I found the solution thanks to Giba in [XOOPS Brasil](#) in this topic:

[http://www.xoops.net.br/modules/newbb...t\\_id=42401#forumpost42401](http://www.xoops.net.br/modules/newbb...t_id=42401#forumpost42401)

Is very simple with php custom block:

```
if(!defined('XOOPS_ROOT_PATH')) exit();
$myvar = $GLOBALS["xoTheme"];
echo ' ';
```

With this, if you change the theme, you will see the images/logo.gif from the other theme

But i still want to know:

Quote:

This is the point: i dont know the autoformat for this smarty.

In the block area show only the {X\_SITEURL} (same as <{\$xoops\_url}> in theme/template).

So, i know:

```
<{$xoops_url}> = {X_SITEURL}
```

but:

```
<{$xoops_imageurl}> = ?
```

or

```
<{$xoTheme}> = ?
```

I think there's no {XOOPS\_URL\_THEME}, {X\_THEMEURL}, {X\_URL\_THEME} or something...
