Please note that neither of: xAsset, xStreamer nor xProject are longer available for public consumption.

The above site is potentially violating my copyright by providing xStreamer for download.

This also applies to Xoops.org and the availability of an older version of xAsset for download.

This is my only warning: any site found hosting either of xAsset, xProject or xStreamer for download will be notified. If download links are not removed by request then your ISP/WebHost will be notified of this copyright breach.

Please Nazar, you remmeber Giba ?

You sent licence for use xStreamer for me, about participation and partner with you ?

About xProject, you licencied for use in we community support [XOOPS Brasil](#) for development modules and too SmartFactory.ca.

This licence is valid still ?

I sent e-mail for you about use modules too.

Thanks
