This is admin area definitions by FabioEgas team www.xoops.net.br and integration by TheRpLima.

Bellow, translated by google temporary.

To protect E-mails against Spam?

Selecting "Yes" all emails that they are part of the content of the site will be transformed automatically into images to prevent Spam

Archive of source for the image of the email

I will choose one of the sources in the list to be used for the generator of email images. Obs.: This resource alone has effect if the option **To protect E-mails against Spam?** it will be activated.

Size of the source

It types a number to show the text in this size of source.

Color of the source in the image of the email

I will choose a color to show the image of the email. Obs.: This resource alone has effect if the option **To protect E-mails against Spam?** it will be activated.

Color of the shade of the image of the email

I will choose a color to show the shade of the image of the email. Blank case leaves does not want to use shade. Obs.: This resource alone has effect if the option **To protect E-mails against Spam?** it will be activated.

Displacement X of the shade

It types a value that will represent the horizontal displacement of the shade of the text of the email in pixels. Obs.: This resource alone has effect if the option **Color of the shade of the image of the email** will not be empty.

Displacement Y of the shade

It types a value that will represent the vertical displacement of the shade of the text of the email in pixels. Obs.: This resource alone has effect if the option **Color of the shade of the image of the email** will not be empty.
