Ok. My question was solved in XOOPS TOTAL, XOOPS Brazilian community support.

http://www.xoops.net.br/modules/newbb ... t_id=45924#forumpost45924

Here is the code:

In the file **modules/newbb/class/forum.php** find the function **getAllTopics**.

Inside it, find this lines:

```
// topic_icon: priority: sticky -> digest -> regular
    if ($myrow['icon'] && is_file(XOOPS_ROOT_PATH . '/images/subject/' . $myrow['icon'])) {
        $topic_icon = '';
        $stick = 1;
    } else {
        $topic_icon = '';
        $stick = 1;
    }
}
```

and change them by these:

```
$sql1 = 'SELECT * FROM '.$this->db->prefix('bb_posts').' WHERE topic_id='.$myrow['topic_id'].
' ORDER BY pid ASC LIMIT 1';
$res = $this->db->query($sql1);
$row = $this->db->fetchArray($res);
if ($row['icon'] && is_file(XOOPS_ROOT_PATH . '/images/subject/' . $row['icon'])) {
    $topic_icon = '';
    $stick = 1;
} else {
    $topic_icon = '';
    $stick = 1;
}
```

Cheers!
