underdog,

Can you create a form, (html, guestbook type is fine) for user input with the appropriate fields.

As an example of the questions needed to route the, for lack of better word, 'bugger'?

Save file as on your desktop then we will find a proper home, if you don't have one to upload to.

Need some general examples to go by in designing an appropriate form.

CC Team...

oops, we have the formalizer guy, Jeff and his product all ready to go. Seems like a good time to take advantage of local XOOPS talent.

I've got the place (for designing the preliminary form) if you can find someone with the time and talent.
