I haate to admit this but I still cannot find cbb 3.08. Can you give me the direct link??? That was what I was looking for when I came up with the CBB 4.0 stuff. I even went to xoopswiki and that is just documentation. Once I get it now I know where to put it where ~I~ can find it again.

Anyone who can do any corrections on these links, I'd sure appreciate it. Thanks in advance.
