Hey DCrussader, it's obviously that you misunderstood everything and everyone, refering to Cube, you're wrong. But [XOOPS Cube](#) is not the topic.

Why I'm wrong, with that ? You recommend forks here, why Cube and not ExV2 or RunCMS ?

Let's make it a topic then, since u're looking more cooperative on this forums, what the #OOPS# is the problem with this [XOOPS Cube](#) Administration

<http://img214.imageshack.us/my.php?image=xcl212uk1.jpg>

that's how looks [XOOPS Cube](#) 2.1.2 on

<http://www.tophost.bg>

<http://www.siteground.com/>

and everyone knows how looks the 3 years old core (my xoops).

Or again here is not the place and time to discuss [XOOPS Cube](#) matters ?

Let's people know how good is the Cube Official supporters, specially you...

... and few words about [XOOPS Brasil](#) 2.0.18, you have to check it by your eyes Damaster, that's means modern, easy to use, lovely administration, not the one provided few lines above.
