URL:

1) Delete adminmenu.php from your cache directory.

Then You should get the this is the first time you have entered the site message, when you log on.

Viewing source:

The html output of the page that holds the submit or cancel button is as follows on my setup.

```
<!DOCTYPE html PUBLIC
'-/W3C//DTD XHTML 1.0 Transitional//EN' 'http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd'
><html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en" lang="en">
  <head>
    <meta http-equiv="content-type" content="text/html; charset=ISO-8859-1" />
    <meta http-equiv="content-language" content="en" />
    <meta name="robots" content="" />
    <meta name="keywords" content="" />
    <meta name="description" content="" />
    <meta name="rating" content="" />
    <meta name="author" content="" />
    <meta name="copyright" content="" />
    <meta name="generator" content="XOOPS" />
    <title>XOOPS Site</title>
    <script type="text/javascript" src="http://www.xoops.net.br/include/xoops.js"></script>
    <link rel="stylesheet" type="text/css" media="all" href="http://www.xoops.net.br/xoops.css" /><link
rel="stylesheet" type="text/css" media="all" href="http://www.xoops.net.br/themes/default/style.css" /
></head><body>
  <div class="confirmMsg">
    <h4>This is your first time to enter the administration section. Press the button below to proceed.
</h4>
    <form method="post" action="admin.php">
      <input type="hidden" name="op" value="generate" /><input type='hidden' name='XOOPS_TOKEN
_REQUEST' id='XOOPS_TOKEN_REQUEST' value='____your token code here_____' />
      <input type="submit" name="confirm_submit" value="Submit" /> <input type="button" name="co
nfirm_back" value="Cancel" onclick="javascript:history.go(-1);" />
    </form>
  </div>
</body></html>
```

After clicking on submit the program re-writes the adminmenu.php into the cache directory.

So make sure your permissions are set on the cache folder. You may need to go to your cpanel and varify or set the permissions there.

As a matter of fact, I think you do have to set the permissions through the cpanel with some servers.
