ok,

I think that failed 2 work in this test, though it would not change the result in speed if compared to the XTXM xoopers here:

<http://www.xoops.net.br/>

But this other original work done by wizanda. An original distribution of 2.2 but custom and prioritizing speed. I have tested and assure that it is about 4 times faster on the basic functions of work.

<http://wizanda.svn.sourceforge.net/viewvc/wizanda/finalize/>

If he can perform the test, the result is welcome.

You can check in the roadmap and also in our wiki.

Ps: This version XTXM xoopers was placed the provision of the entire team to develop the core to analyze what would be good to include in the core.

In any case, there remains a willingness to use what is necessary.

ps2: **Because of censorship exists here today, withdrew a few sentences to avoid any kind of change in my answer.**
