Version 0.09 of Articles, the Xoops 2 module is now available.

The main changes since the last public release (v0.06) are:

- o Fixed problems with showing special/extended characters in article and category title input text box when editing.
- o A few minor changes to prevent possible problems.
- o Added a "flat" or "threaded" view option to the index page where you can choose to either show categories and article listings, or just categories with sub-links to article lists.
- o Added general prefs page with option for above, as well as option to change the background colour of the article text table.
- o Updated database update script for this version.
- o Various minor changes and stuff.
- o Cleaned up "undefined variables" in category admin.
- o Cleaned up "undefined variables" in article admin.
- o Fixed disable html/smilies/codes not inserting into database when adding a new article.
- o Author's/Poster's UID now stored in database (for future use).
- o Fully implemented Xoops' "displayTarea" function, so main article text will now enable/disable: HTML tags, Smilies, Xoops codes, images and auto line break conversion (on a "per article" basis and not for all).
- o fixed a bug in article admin list table being broken.

The latest version of Articles and any support files can be downloaded from [here](#).

Other notable news for Articles is the announcement for Brazilian support for Articles at <http://www.xoops.net.br> and a Spanish translation by Fred Marti (available in the download area). Thanks for your support!
